

Powerful Resources for a Clean Motion Picture Industry

#BeReelGreen™

Explore the Toolkit

The **Clean Energy Toolkit** is a resource designed by the Clean Energy Committee for British Columbia's motion picture industry. It's an evolving resource that orients, engages and services productions, municipalities and people to help the film industry move away from fossil fuel consumption toward clean power - alternative power sources that do not involve the use of fossil fuels. Clean power is greener power. It's renewable, zero emission, and doesn't pollute the atmosphere when used.

Spread the Word

Share the toolkit with:

- 1. Film crew** who choose, schedule, or can influence power source decisions for a production.
- 2. Property owners, managers and liaisons** who are decision-makers for clean energy installations.
- 3. Municipalities, investors and people** who advocate and improve environmental practices and services.

Spark conversation with our shareable social media and editorial content:

- Clean-Powered Production **social assets**
- Clean-Powered Production **blog posts**
